

INDUSTRY NEWS

Arno's range of parting & grooving tools is huge!

Arno's SA Parting and Grooving System has taken ordinary parting tools to an extraordinary level! By incorporating the patented Arno Cooling System that provides maximum coolant to the cut zone, they have engineered world-class productivity into their SA Parting and Grooving System.

Strong, double-ended inserts are securely clamped to provide more process stability. There are also many options to connect the system to your CNC turning center. From convenient square shank back ends to industrial standard and machine-specific adaptors, their SA system will become the only parting and grooving system you'll need in your shop.

Arno's SA range of inserts include world class grades and geometries that are competent in machining materials ranging from Aluminum to high temperature alloys. With diameter capacities up to 4.0" and widths from .059" to .394", the SA Parting and Grooving System will be the only parting system you'll need. Right, left, and neutral approaches give you options for pip controls, making this range of inserts necessary for completing the program.
