Popular Turning Bar and Cutter Head Cross Reference

MAQ's self-tuning mass damper (STMD™) technology is included in all of their anti-vibration tool holders and reduces vibration in a wide range of frequencies. This technology is used for CNC milling, turning and hole making operations. This new technology greatly reduces the unpredictable and frustrating byproducts of machining: vibrations (regenerative tool chatter). All MAQ vibration damped turning tools have the self-tuning mass damper technology inside and cover lengths from 3xD to 15xD. Starting from 8 mm or 5/16 inch diameter, the "in-stock" item covers up to 60 mm or 2 1/2 inch diameter. Bigger sizes are available as "on-request" and also the "custom-made."

Below is the cross reference table for popular bar sizes with matching head size options. Bar sizes listed in each section can use any of the heads listed under that section.
